

Voix sur IP: des experts redoutent des détournements pirates

Experts Still Fear VOIP Hack Attack ----- With more consumers expected to adopt VOIP service in the next few years, experts worry that the benefits of the technology might be offset by its immense potential for fraud and abuse. While IP-based calls are usually cheaper and offer far more user choice and control than analog phone service, some consumer-grade VOIP services push their calls over the public Internet, where they are more vulnerable to interception or manipulation than on the PSTN (see Vendor Points to VOIP Vulnerabilities and VOIP Security Poses a Problem).
